

PROJECT – Machine Learning

Machine Learning Models and Text Mining Models.

ASHWANI KUMAR
[COMPANY NAME]

Problem 1:

Part 1: Machine Learning Models

You work for an office transport company. You are in discussions with ABC Consulting company for providing transport for their employees. For this purpose, you are tasked with understanding how do the employees of ABC Consulting prefer to commute presently (between home and office). Based on the parameters like age, salary, work experience etc. given in the data set 'Transport.csv', you are required to predict the preferred mode of transport. The project requires you to build several Machine Learning models and compare them so that the model can be finalised.

Data Dictionary

Age : Age of the Employee in Years

Gender : Gender of the Employee

Engineer : For Engineer =1 , Non Engineer =0

MBA : For MBA =1 , Non MBA =0

Work Exp : Experience in years

Salary : Salary in Lakhs per Annum

Distance : Distance in Kms from Home to Office

license : If Employee has Driving Licence -1, If not, then 0

Transport : Mode of Transport

1.1 Basic data summary, Univariate, Bivariate analysis, graphs, checking correlations, outliers and missing values treatment (if necessary) and check the basic descriptive statistics of the dataset.

Loaded all the necessary library for the model building.

Below are the head and the tail of the data for basic analysis :

Head (First 5 Rows) of the Data Set :

	Age	Gender	Engineer	MBA	Work Exp	Salary	Distance	license	Transport
0	28	Male	0	0	4	14.3	3.2	0	Public Transport
1	23	Female	1	0	4	8.3	3.3	0	Public Transport
2	29	Male	1	0	7	13.4	4.1	0	Public Transport
3	28	Female	1	1	5	13.4	4.5	0	Public Transport
4	27	Male	1	0	4	13.4	4.6	0	Public Transport

Tail (Last 5 Rows) of the Data Set :

	Age	Gender	Engineer	MBA	Work Exp	Salary	Distance	license	Transport
439	40	Male	1	0	20	57.0	21.4	1	Private Transport
440	38	Male	1	0	19	44.0	21.5	1	Private Transport
441	37	Male	1	0	19	45.0	21.5	1	Private Transport
442	37	Male	0	0	19	47.0	22.8	1	Private Transport
443	39	Male	1	1	21	50.0	23.4	1	Private Transport

The Shape of the Data :

The Shape of the Original data set is (444, 9)
Row : 444 . Columns : 9 .

Let's check the basic info. of the Data Set :

```
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 444 entries, 0 to 443
Data columns (total 9 columns):
#   Column      Non-Null Count  Dtype
---  -
0   Age         444 non-null   int64
1   Gender      444 non-null   object
2   Engineer    444 non-null   int64
3   MBA         444 non-null   int64
4   Work Exp    444 non-null   int64
5   Salary      444 non-null   float64
6   Distance    444 non-null   float64
7   license     444 non-null   int64
8   Transport   444 non-null   object
dtypes: float64(2), int64(5), object(2)
memory usage: 31.3+ KB
```

From the above details, we can see that data has all "object", "float64" and "int64" type of variable

Checking the Null values in the data :

```
Age         0
Gender      0
Engineer    0
MBA         0
Work Exp    0
Salary      0
Distance    0
license     0
Transport   0
dtype: int64
```

As per observation, we found no Null values in this data

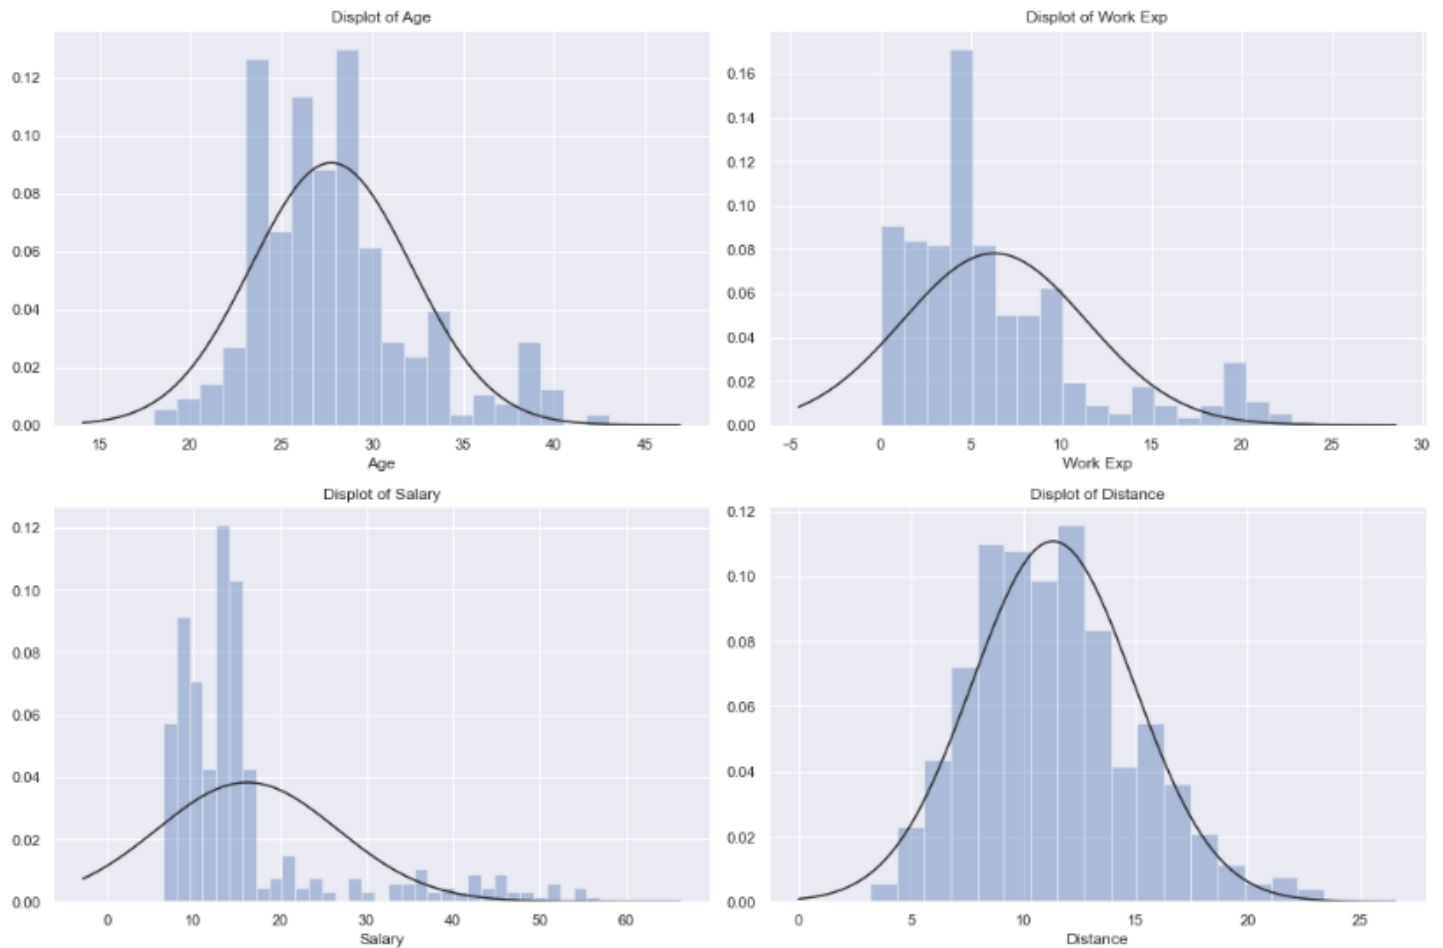

Duplicates in the Data Set :

After analysiing the data we found 0 duplicate rows in the problem 1 Data Set, which is mentioned below :

Description of the Data Set :

	count	unique	top	freq	mean	std	min	25%	50%	75%	max
Age	444	NaN	NaN	NaN	27.7477	4.41671	18	25	27	30	43
Gender	444	2	Male	316	NaN	NaN	NaN	NaN	NaN	NaN	NaN

Distribution Plot for Visual Skewness :

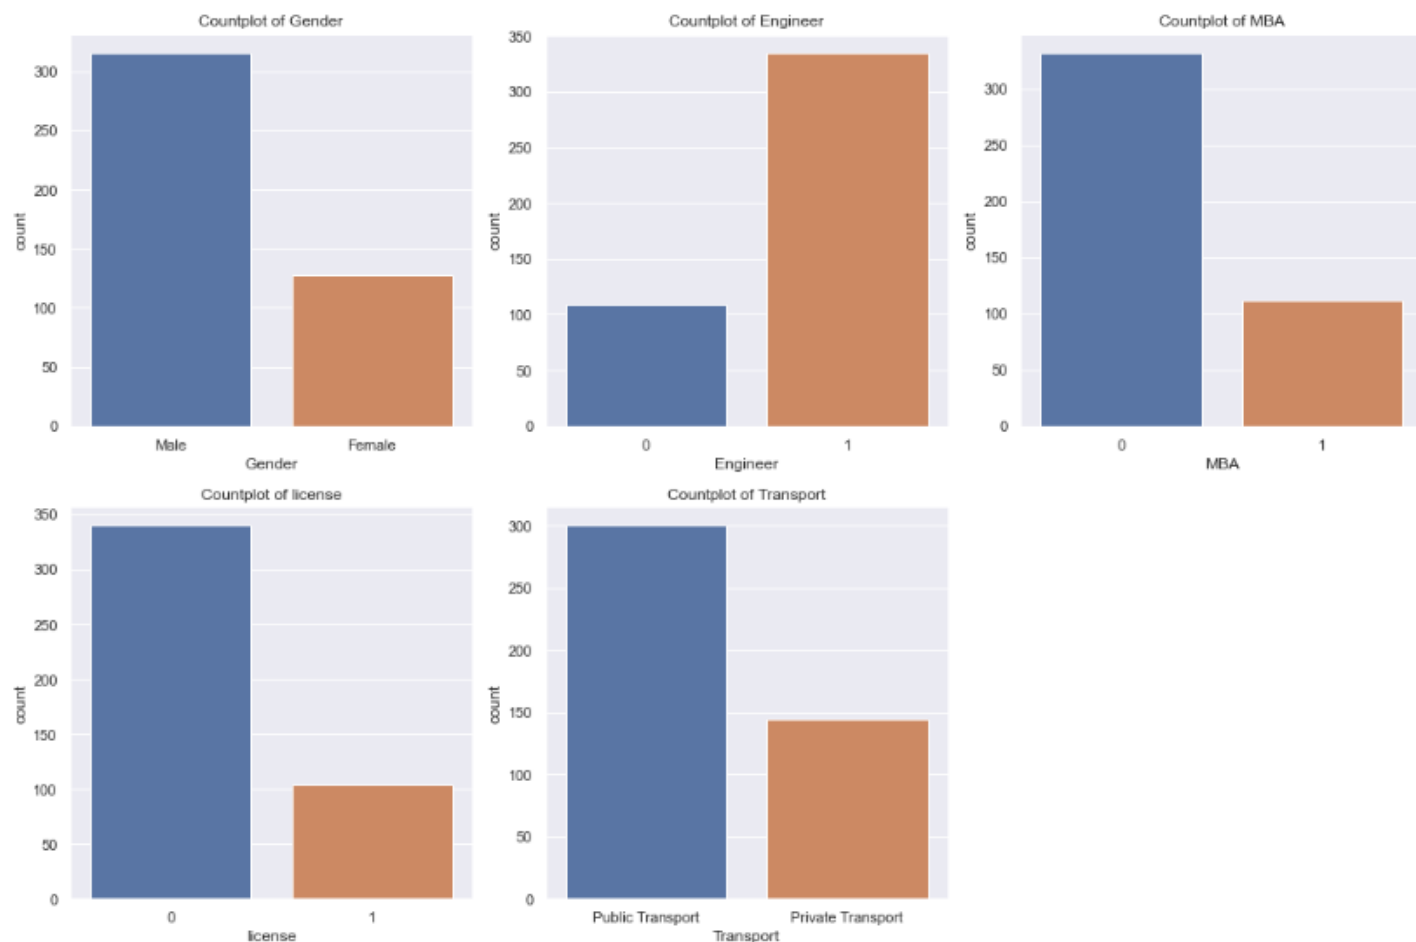

Skewness in Numbers for each Numeric Variable :

```
Age      0.955276
Work Exp  1.352840
Salary   2.044533
Distance  0.539851
dtype: float64
```

Observation :

- From the above Describe Data: We have 4, "Numerical" data type.
- For Numeric Columns: we have 'Age', 'Work Exp', 'Salary' and 'Distance'.
- From the above Distribution Graph and Describe Table: It's seem that, there most of the variable such as "Age" and "Distance" have normally distribution.
- But after analzed very closly, we found that "Salary" and "Work Exp" has tend to show slightly right skewness.

Categorical Univariate Analysis :

Categorical type Variables in the Data set :

In this data set, we have category of GENDER : 2

```
Male      316
Female    128
Name: Gender, dtype: int64
```

In this data set, we have category of ENGINEER : 2

```
1      335
0      109
Name: Engineer, dtype: int64
```

In this data set, we have category of MBA : 2

```
0      332
1      112
Name: MBA, dtype: int64
```

In this data set, we have category of LICENSE : 2

```
0      340
1      104
Name: license, dtype: int64
```

In this data set, we have category of TRANSPORT : 2

```
Public Transport    300
Private Transport   144
Name: Transport, dtype: int64
```

Observation :

- From the above Describe Data: We have 2, "Categorical" data type.
- For Numeric Columns: we have 'Gender' and 'Transport'.
- From the above Graph and Describe Table: It's seem that, there most of the people are male.
- And People tend to use "Public Transport" more.
- From above Table, there are more people with License.

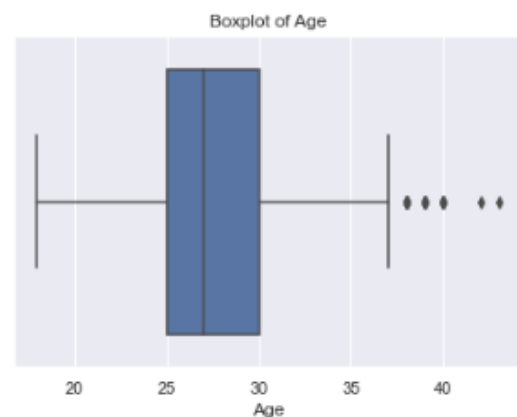

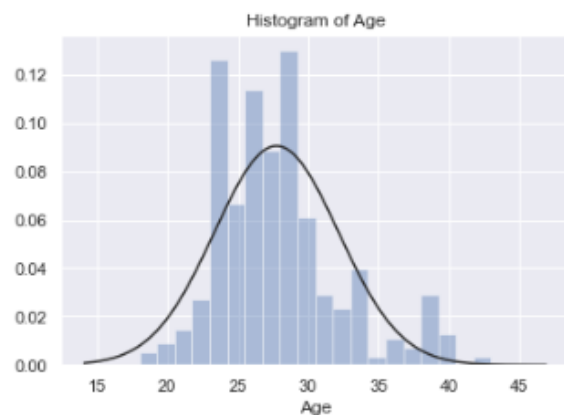

Let's perform Univariate, Bi-Variate and Multi-variate along with EDA to check Outliers.

Lets perform Univariate Analysis on Numeric Variables:

Description of Age

```
count    444.000000
mean      27.747748
std        4.416710

75%       13.425000
max       23.400000
Name: Distance, dtype: float64
```

Distribution of Distance

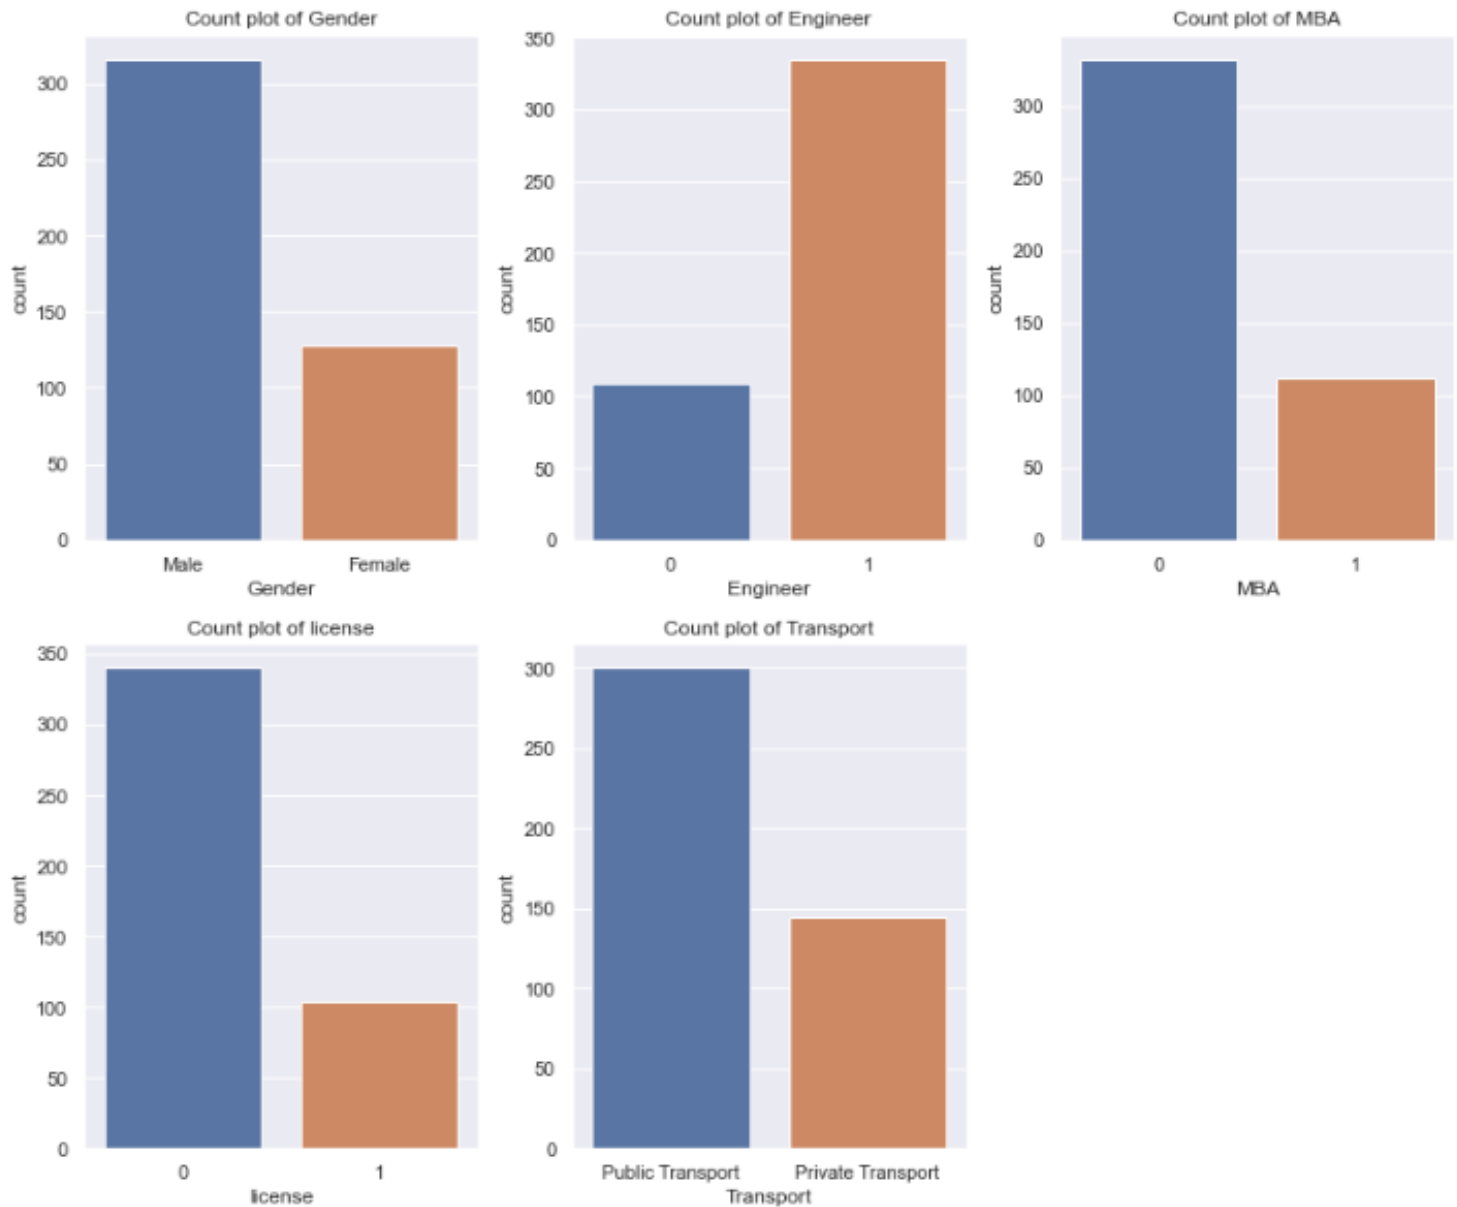

Observation:

- There are 4 numeric fields in the data set.add
- Variable like :- "Salary" seems to have more outlier as compare to other variable other variable.
- Variable like :- "Age", "Work Exp", "Salary" and "Distance" also show some outliers.

Let's perform the Univariate Analysis on Categorical Analysis :

COUNT PLOT OF ALL CATEGORICAL DATA

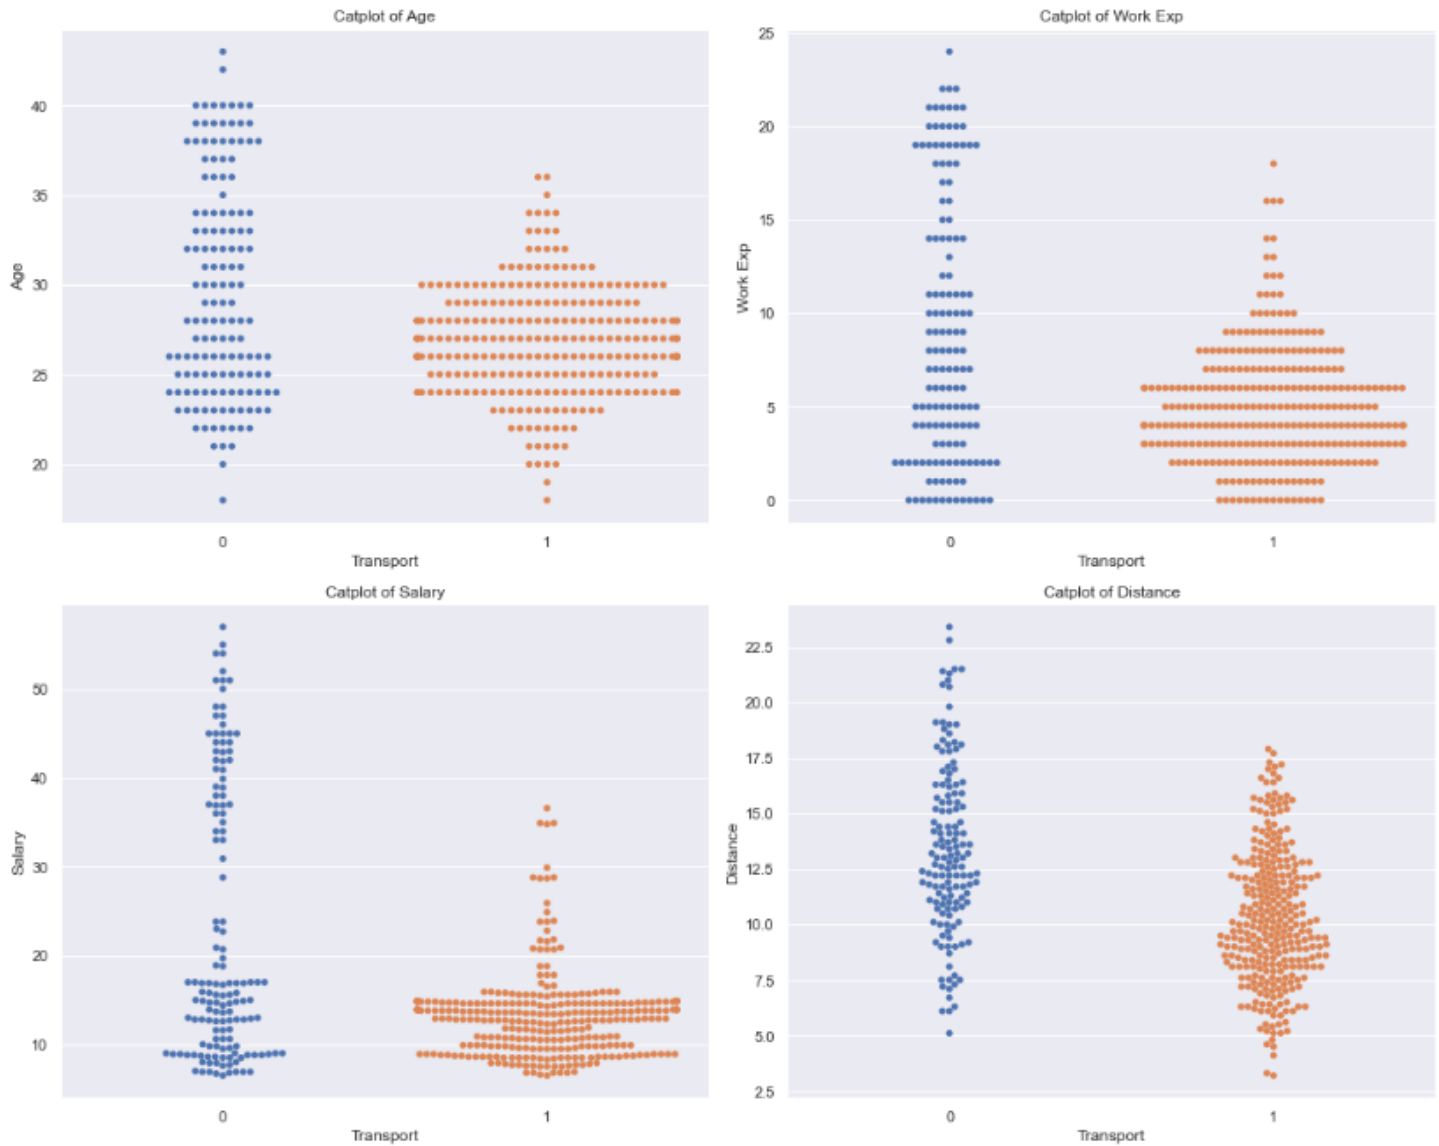

Observation:

- From the above countplot of "Vote", we can see that in the "Vote" variable, "Labor" seems to have more count as compare to other.
- From the above countplot of "Gender", we can see that, female has the highest number of count in this data set.
- From the above countplot of "Engineer", the count of Engineers is more.
- From the above countplot of "License", we can see that count of employees with no license is more.

Let's perform Bi-variate and Multi-variate Analysis :

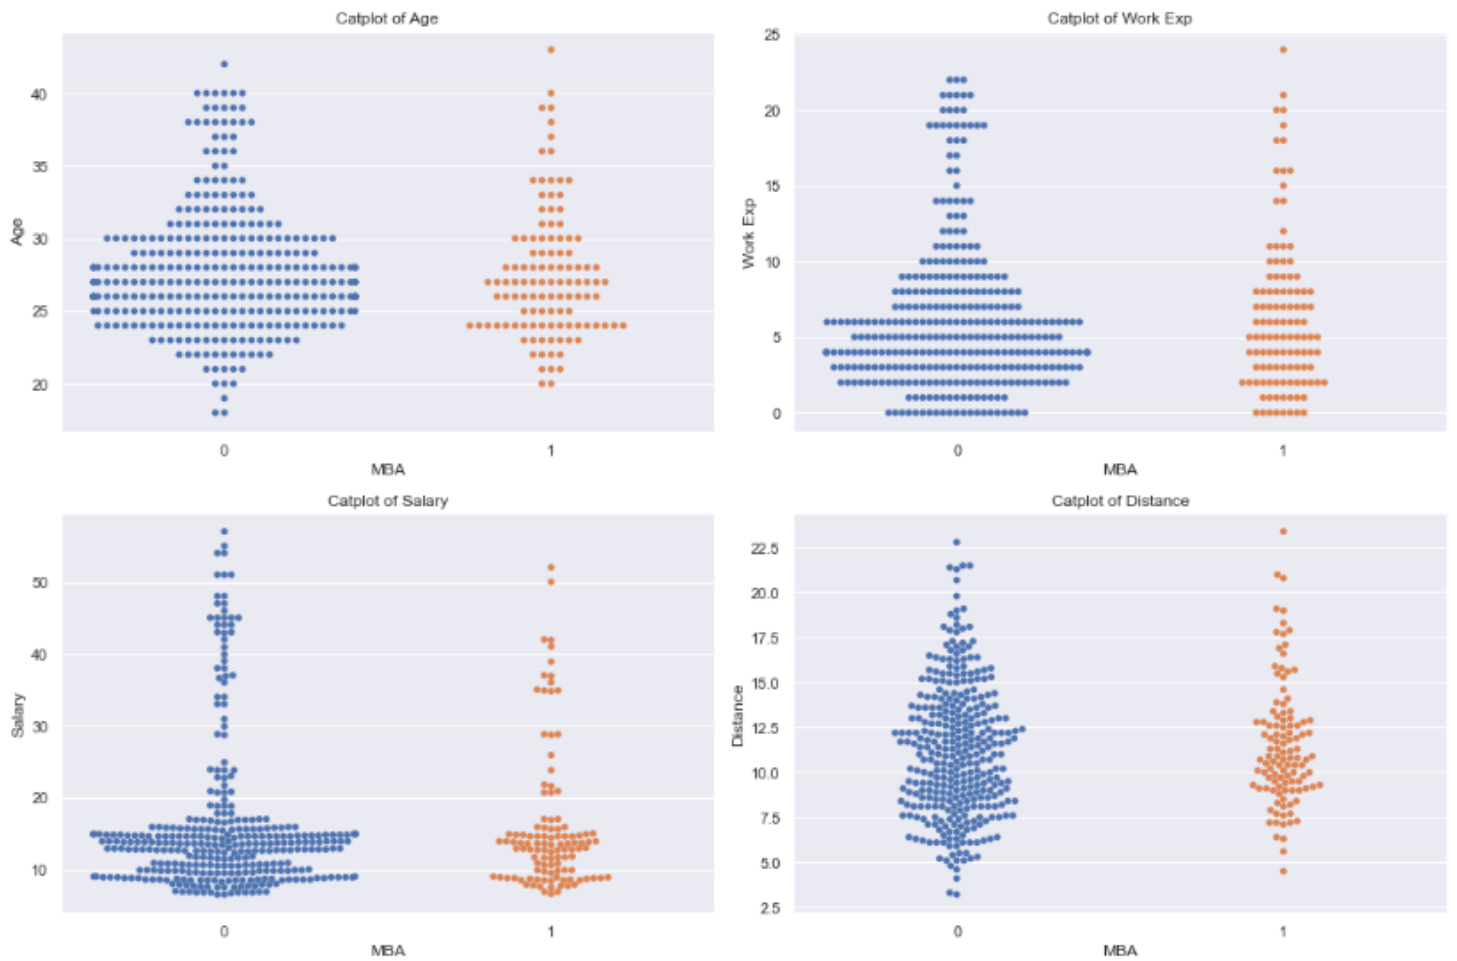

SWARM-PLOT OF ALL VARIABLES IN COMPARISON WITH 'Engineer'

Observation:

- From above "Age" graph, we can see that the number of people are more who have engineer Degree.
- From above "Work Exp" graph, People as Engineer tend to have more count of experience people, which is between 0 to 10 years.
- From above "Salary" graph, People as Engineer, showing maximum of people having salary 10 to 20 lakhs.
- From above "Distance" graph, People as Engineer has to travel more distance. Majority of people are traveling 7.5 to 12.5 km.

SWARM-PLOT OF ALL VARIABLES IN COMPARISON WITH 'MBA'

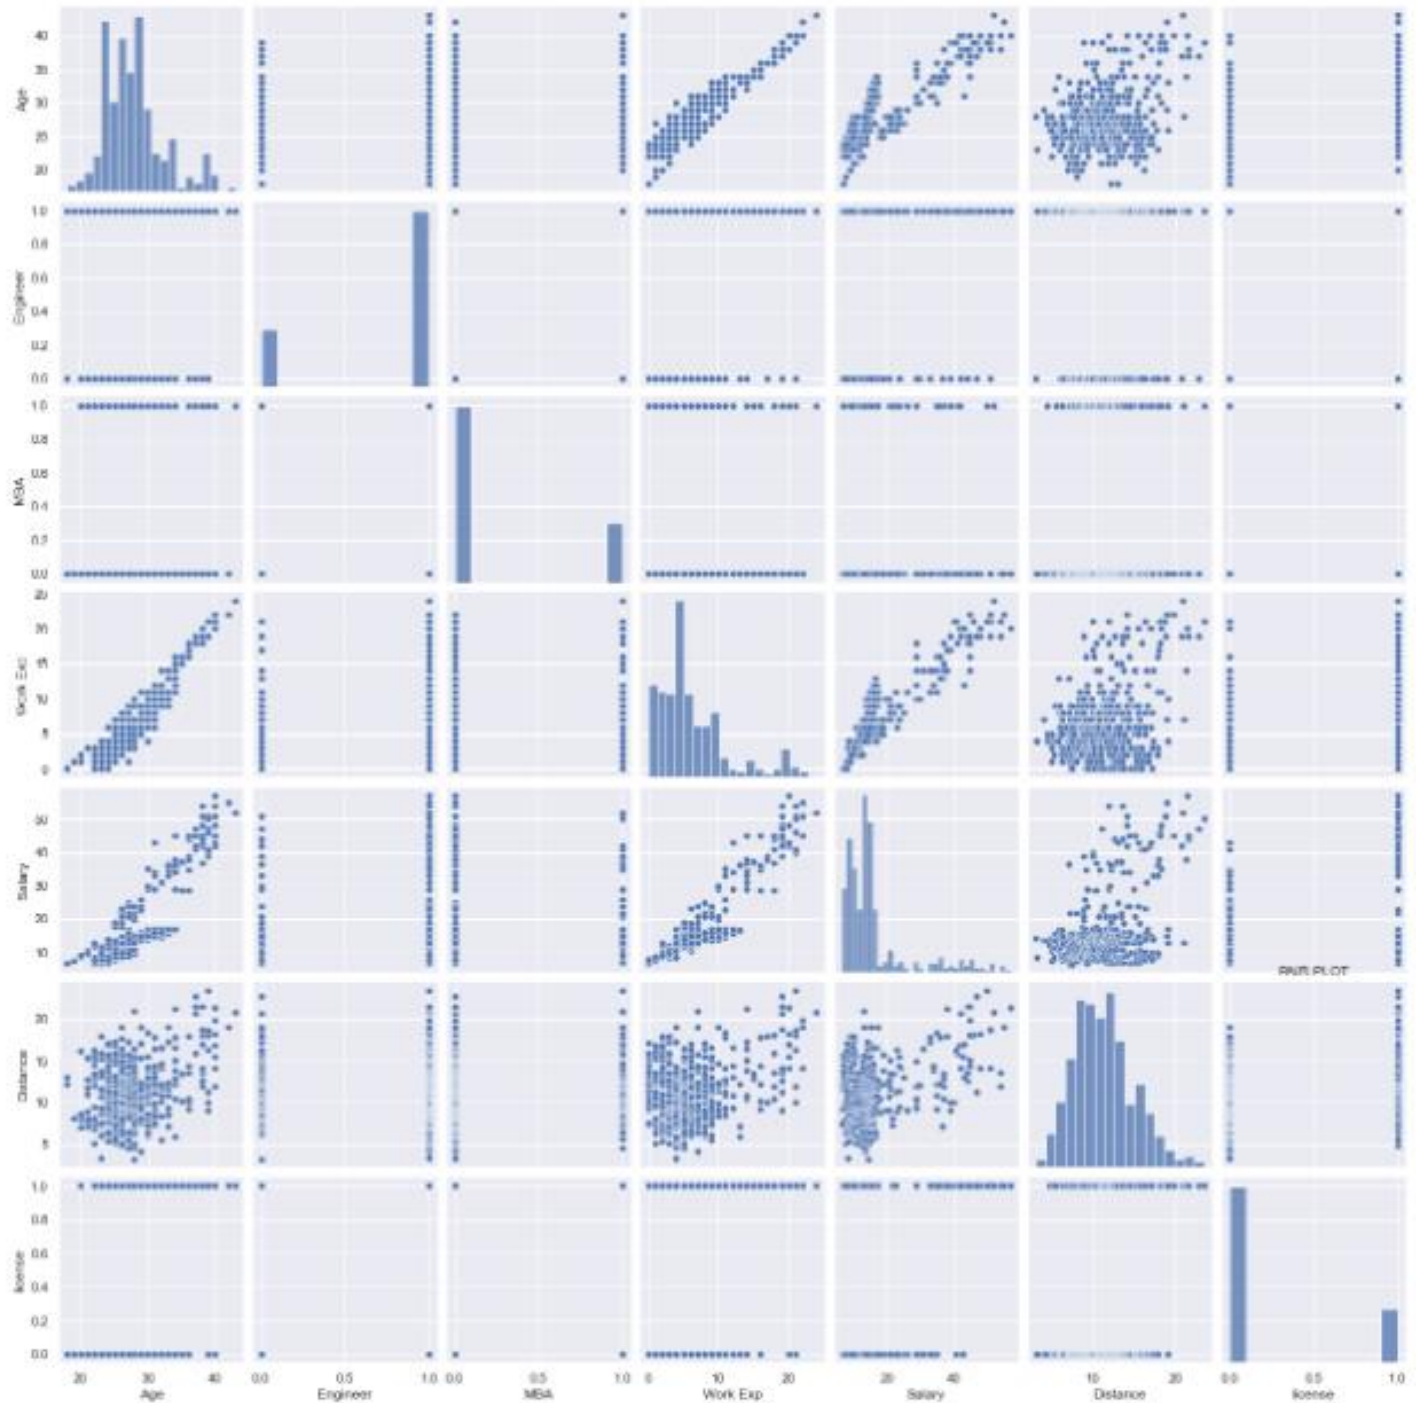

Observation:

- From above "Age" graph, we can see that People with no MBA tend to have more counts.
- From above "Salary" graph, People with no MBA tend to have more count in the range between 10 to 20 lakhs.
- From above "Distance" graph, People with no MBA have more count who, tend to travel more distance.

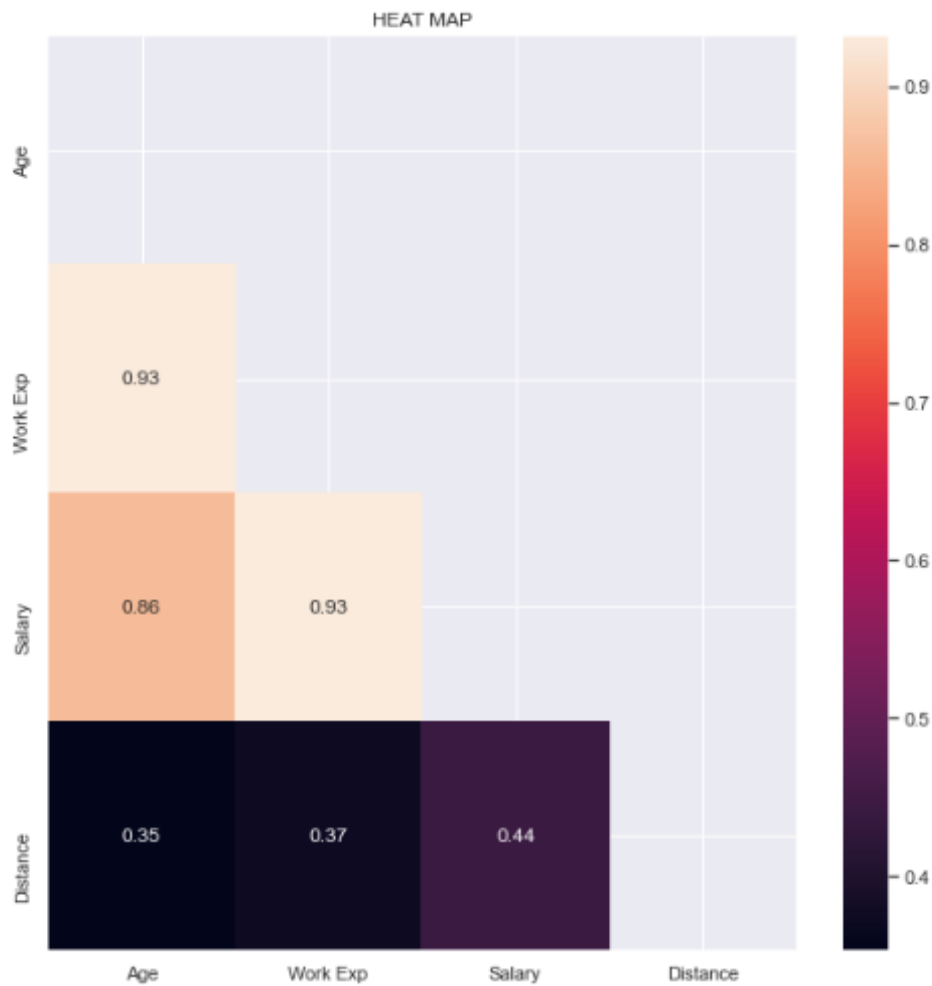

Checking the trend in the Data:

PAIR-PLOT

Observation:

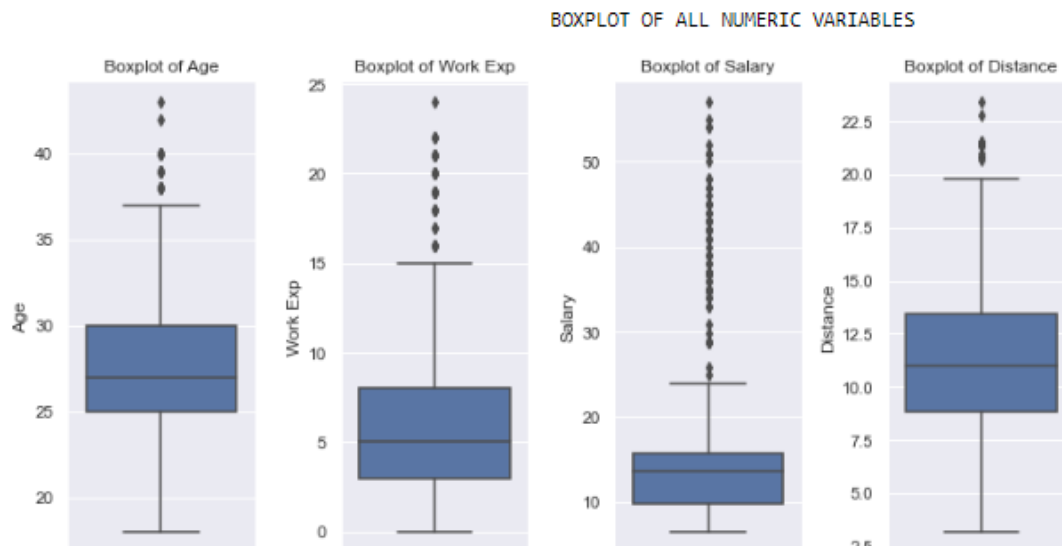

- From the above Pairplot, we can see, the more Age have more work Experience.
- The People with more Age has more Salary.
- In above Graph, we can clearly see that the more Work Experience.

Observation :

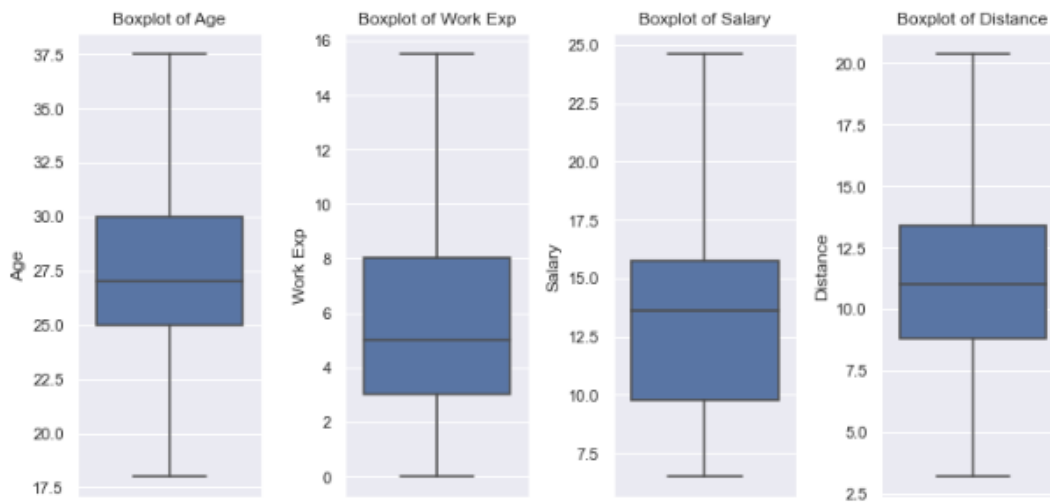

- In the above heatmap, we can see high correlation between "Age" and "Work Exp".
- From the above heatmap, there is also a good correlation between "Salary" and "Age".
- Also, "Salary" and "Work Exp", show a high correlation.

Checking for Outliers in the Data Set :

Here, the Data set show us some outliers in above graph, show to make out model more efficient we need to treat the outliers.

BOXPLOT OF ALL NUMERIC VARIABLES

One Hot Encoding on Discrete Data set :

Encoding:

We need to perform Dummies encoding to convert discrete variable in Dummy variables for further analysis.

4	0.461538	0.258065	0.380952	0.081573	1	1	1	0	0

1.2. Split the data into train and test in the ratio 70:30. Is scaling necessary or not?

Scaling the Data:

Scaling is a necessity when using Distance-Based models, but however this data set also have some binary values. So, keeping this in mind we will scale the data by using Min-Max scaling.

	Age	Work Exp	Salary	Distance	Transport	Gender_Male	Engineer_1	MBA_1	license_1
0	0.512821	0.258065	0.430642	0.000000	1	1	0	0	0
1	0.256410	0.258065	0.099379	0.005827	1	0	1	0	0
2	0.564103	0.451613	0.380952	0.052440	1	1	1	0	0
3	0.512821	0.322581	0.380952	0.075747	1	0	1	1	0
4	0.461538	0.258065	0.380952	0.081573	1	1	1	0	0

Split the data into train and test in the ratio 70:30

Independants Variables :

X = Data without "Holliday_Package_yes" variable

	Age	Work Exp	Salary	Distance	Gender_Male	Engineer_1	MBA_1	license_1
0	0.512821	0.258065	0.430642	0.000000	1	0	0	0
1	0.256410	0.258065	0.099379	0.005827	0	1	0	0
2	0.564103	0.451613	0.380952	0.052440	1	1	0	0
3	0.512821	0.322581	0.380952	0.075747	0	1	1	0
4	0.461538	0.258065	0.380952	0.081573	1	1	0	0

Target or Dependant Variable :

y = Data of only "Holliday_Package_yes" variable

Transport	
0	1
1	1
2	1
3	1
4	1

Technic used to split the data :

```
X_train,X_test,y_train,y_test = train_test_split(X,y, test_size=0.3, random_state=0)
```

So, now the data has been split into "X_train","X_test" and "y_train","y_test"

1.3. Build the following models on the 70% training data and check the performance of these models on the Training as well as the 30% Test data using the various inferences from the Confusion Matrix and plotting a AUC-ROC curve along with the AUC values. Tune the models wherever required for optimum performance.:

- a. Logistic Regression Model
- b. Linear Discriminant Analysis
- c. Decision Tree Classifier – CART model
- d. Naive Bayes Model
- e. KNN Model
- f. Random Forest Model
- g. Boosting Classifier Model using Gradient boost.

Logistic Regression Model:

The Logistic Regression model is build using : `LogisticRegression()`

1.4. Which model performs the best?

Observation :

In the below table, we have built multiple model and compiled the score to compare it with each other.

	Train_Score	Test_Score
Logistic Regression Model	0.80	0.81
Linear Discriminant Analysis	0.80	0.78
Decision Tree Classifier – CART model	0.67	0.68
Naïve Bayes Model	0.77	0.81
KNN Model	1.00	0.81
Random Forest Model	1.00	0.86
Boosting Classifier Model using Gradient boost	0.94	0.84

Inference :

- From the above table, "Logistic Regression Model" and "Linear Discriminant Analysis" has balanced score on bases of Train & Test Score.
- From the above table - "KNN Model" and "Random Forest Model" has the highest Train score but the Test score is very less, which make these model as Overfitting.
- From the above table, "Decision Tree Classifier - CART model" has the lowest Train Score and Test Score, which makes this model as Underfitting.
- So, After observing all the models from the above table, we cam to conclusion that "Logistic Regression Model" has the right score.

1.5 What are your business insights?

We had a business problem in which, we need to predict whether how do the employees of ABC Consulting prefer to commute presently (between home and office) on the basis of the information given in the data set. And, for this problem, we had perform Logistic Regression, Linear Discriminant Analysis, Decision Tree Classifier – CART model, Naïve Bayes Model, KNN Model, Random Forest Model and Boosting Classifier Model using Gradient boost for prediction, in which Logistic Regression Model perform quite Well.

Also, after performing Exploratory Data Analysis, we found :

- We have 4, "Numerical" data type.
- We have 'Age', 'Work Exp', 'Salary' and 'Distance'.
- It's seem that, there most of the variable such as "Age" and "Distance" have normally distribution.
- But after analzed very closly, we found that "Salary" and "Work Exp" has tend to show slighly right skewness.
- We can see that in the "Vote" variable, "Labor" seems to have more count as compare to other.
- We can see that, female has the highest number of count in this data set.
- "Engineer", the count of Engineers is more.
- "License", we can see that count of employees with no license is more.
- Employees of Age between 24 years to 30 years tend to use transport facility.
- Employees with Work Experience between 0 years to 10 years approx, utilize transport facility.
- Employees with salary range between 10 to 18, use transport.
- Employees with less distance use transport.

Recommendations :

- To improve Tansport, we can bring many offers for the people who are +30 years old.
- For the Employees having High Salary, we can provide them some tranport with extra benefit because their salary can effort the services and also, they can be in office on time.

The Best variable, we pull out from the equation are :

- **Salary** , which is the Employee Salary.
- **Age** : The Employee age in years.
- **Work Exp** : Experience in years.

THE END

Problem 2:

A dataset of Shark Tank episodes is made available. It contains 495 entrepreneurs making their pitch to the VC sharks.

You will ONLY use "Description" column for the initial text mining exercise.

1. Pick out the Deal (Dependent Variable) and Description columns into a separate data frame.
2. Create two corpora, one with those who secured a Deal, the other with those who did not secure a deal.
3. The following exercise is to be done for both the corpora:
 - a) Find the number of characters for both the corpora.
 - b) Remove Stop Words from the corpora. (Words like 'also', 'made', 'makes', 'like', 'this', 'even' and 'company' are to be removed)
 - c) What were the top 3 most frequently occurring words in both corpora (after removing stop words)?
 - d) Plot the Word Cloud for both the corpora.
4. Refer to both the word clouds. What do you infer?
5. Looking at the word clouds, is it true that the entrepreneurs who introduced devices are less likely to secure a deal based on your analysis?

2.1. Pick out the Deal (Dependent Variable) and Description columns into a separate data frame.

Word Cloud Mapping of Deal_False Dataframe in which [Did not Secured a Deal]:

2.4 Refer to both the word clouds. What do you infer ?

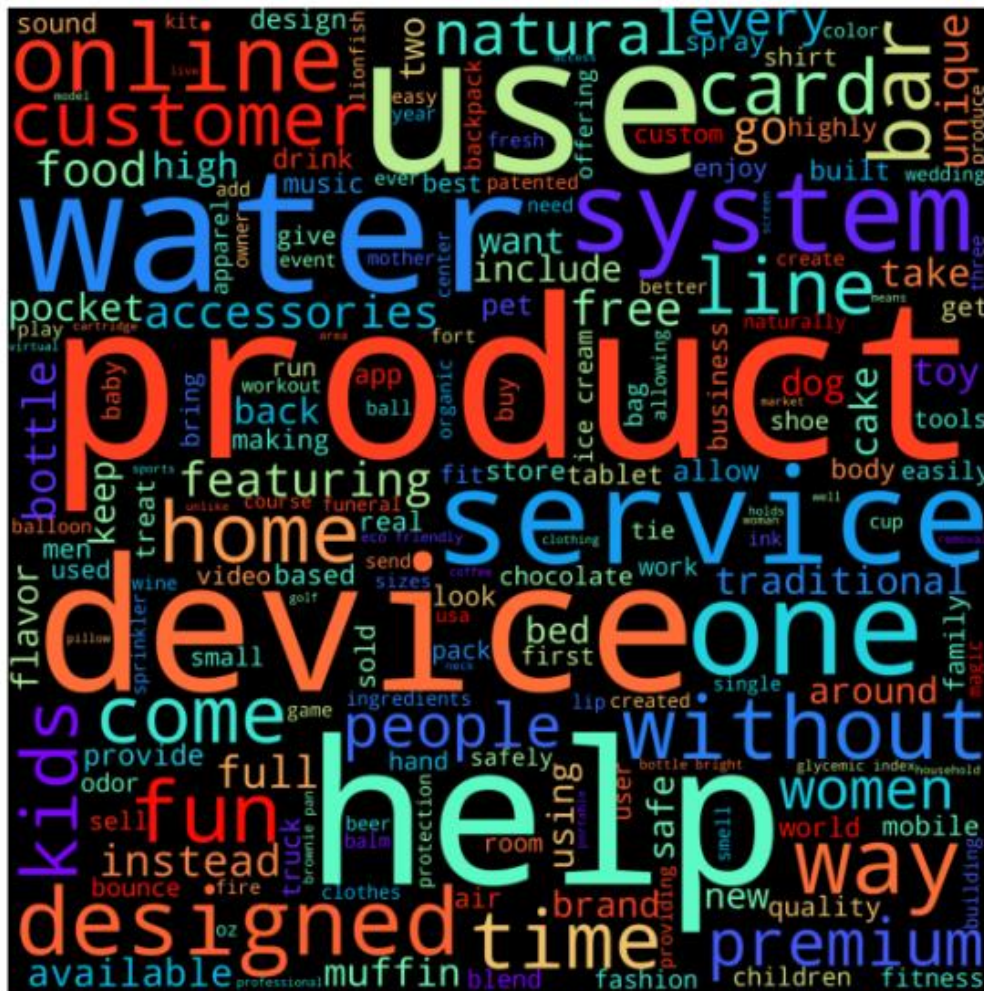

Inference of Deal_True (Secured a Deal) :

Observation:

- In Shark Tank dataset, we found 64058 numbers of "Characters".
- In Shark Tank dataset, we found 251 numbers of "Words".
- In Shark Tank dataset, the words which is used maximum time are :
 - free
 - children
 - designed
 - easy
 - natural
 - line
 - product

Inference of Deal_False (Did not Secured a Deal) :

Observation:
